Examiner: M. Burch

For: NONLINEAR AND ADJUSTABLE BUSHINGS

RESPONSE TO OFFICE ACTION

Mail Stop AMENDMENT
Commissioner for Patents
PO Box 1450
Alexandria, VA 22313-1450

Dear Sir:

In response to the Office Action mailed August 25, 2005, the Examiner's attention is directed to the following remarks.

Applicant continues to traverse the restriction requirement. Figure 12 should be included in the examination process at this time. Just because it was listed by the Examiner does not make it proper.

Claims 15, 16, 19, 22 and 23 stand rejected under 35 U.S.C. §102(b) over Neidhart ('060). Anticipation may be established only when a single prior art reference discloses, expressly or under principles of inherency, each and every element of a claimed invention. RCA Corp. v. Applied Digital Data Systems, 730 F.2d 1440, 1444, 221 USPQ 385, 388 (Fed. Cir. 1984). Moreover, anticipation requires the presence of all elements of a claimed invention as arranged in the claim, such that a disclosure "that 'almost' meets that standard does not 'anticipate'." Connell v. Sears, Roebuck Co., 722 F.2d 1542, 1548, 220 USPQ 193, 198 (Fed. Cir. 1983). In this case, the inner sleeves 1 and 2 of Neidhart are not cylindrical but rather, they are conical. "The buffer diagrammatically shown in Figures 1 and 2 comprises two conic elements 1 and 2 ...". Since cones are not cylinders, anticipation is precluded for this reason alone.

Claim 16 includes the limitation of the elements being attached to one of the sleeves. Although claim 16 stands rejected under 35 U.S.C. §102(b) over Neidhart, the Examiner makes no comment regarding this rejection, because such a feature is not disclosed by the reference. At least the
